

ADJUSTABLE PRECISION SHUNT REGULATORS

精密可调电压基准源 FH431

DESCRIPTION & FEATURES 概述及特点

The FH431 series ICs are three-terminal adjustable shunt regulators with guaranteed thermal stability over a full operation range. These ICs feature sharp turn-on characteristics, low temperature coefficient and low output impedance, which make them ideal substitutes for Zener diodes in applications such as switching power supply, charger and other adjustable regulators. The FH431 precision reference is offered in three band gap tolerance: 0.5%, 1.0% and 1.5%.

Note 1: Exceeding these ratings could cause damage to the device. All voltages are with respect to Ground.
Currents are positive into, negative out of the specified terminal.

Note 2: Voltage values are with respect to the anode terminal unless otherwise noted.

Note 3: JA: Thermal Resistance-Junction to Ambient, $D_F = 1/J_A$
Junction Temperature Calculation: $T_J = T_A + (P_D \times J_A)$.
The JA numbers are guidelines for the thermal performance of the device/PC-board system.
All of the above assume no ambient airflow.
